

Test Report

NO.: BRCKN8XB3500536D5

Page 1 of 21

(SVHC)

Applicant: Suqian Hollia Arts&Crafts Co.,Ltd

The following sample(s) was/were submitted and identified on behalf of the client as:

Sample Name: Fibre Diffuser Sticks

Color: ruby red、Blue Color、Green Color、Purple Color、Dark Green、brown Color、Dark Blue、Pink Color、yellow Color、Hot Pink

Test Section: Mix Tested

Sample Source: Send Sample

Sample Received Date: 2023-07-13

Testing Period: 2023-07-13 ~ 2023-07-21

Reference specification: Very High Concern (SVHC) testing based on the list published by European Chemicals Agency (ECHA) as of 14 Jun 2023, regarding regulation (EC) No 1907/2006 concerning the REACH. Screening tests based on customer requirements.

Test result(s): Please refer to next page(s)

Test Report
(SVHC)

NO.: BRCKN8XB3500536D5

Page 19 of 21

Test result (Unit: %)

Batch No.	No.	Substance Name(s)	Test Result
I- XXIX	1-235	All tested SVHC in candidate list	N.D.

Note:

DL = Detection Limit
 N.D. = Not Detected (<DL)
 0.1 % = 1000 mg/kg = 1000 ppm
 mg/kg = ppm
 PBT = Persistent, bioaccumulative and toxic; vPvB = very Persistent very Bioaccumulative

- (1) The test result is the result of selected elements and calculated based on the worst situation.
- (2) In view of the substances are established as UVCB substances (substances of unknown or variable composition, complex reaction products or biological materials) consisting of different and variable constituents, the test results are calculated based on the main constituents of the representative compounds for substances.
- (3) When tested substances contain variable compounds, the test results are calculated based on main constituents of the representative compounds for the substances. The test results of the representative compounds are calculated based on the result of specified heavy metal elements.
- (4) TGIC is a mixture and also contains β -TGIC. According to the ECHA's technical dossier the ratio of β -TGIC to TGIC is around 1 to 10. Therefore β -TGIC is issued based on the above-mentioned ratio.
- (5) The substance is considered as SVHC only when the concentration of Michler's ketone (CAS No.:90-94-8) or Michler's base (CAS No.:101-61-1) is more than 0.1% (w/w).

Remarks:

- (1) The chemical analysis of specific SVHC is performed by means of currently available analytical. Techniques in the list published by ECHA as of 14 Jun 2023 shall refer to:
<http://echa.europa.eu/web/guest/candidate-list-table>
<https://echa.europa.eu/substances-of-very-high-concern-identification>
These documents are assessed by ECHA and may be changed in the future.
- (2) In accordance with Regulation (EC) No 1907/2006, any producer or importer of articles shall notify ECHA, in accordance with paragraph 4 of Article 7, if a substance meets the criteria in Article 57 and is identified in accordance with Article 59(1) of the Regulation, if (a) the substance is present in those articles in quantities totaling over one tonne per producer or importer per year; and (b) the substance is present in those articles above a concentration of 0.1 % weight by weight (w/w).
- (3) Article 33 of Regulation (EC) No 1907/2006 requires supplier of an article containing a substance meeting the criteria in Article 57 and identified in accordance with Article 59(1) in a concentration above 0.1 % weight by weight (w/w) shall provide the recipient of the article with sufficient information, available to the supplier, to allow safe use of the article including, as a minimum, the name of that substance.
- (4) The test result in the report is based on test sample. If the sample is homogeneous, the result cannot represent the SVHC concentration in the finished product. These samples may also come from different articles if several homogeneous samples are tested after equal proportion mixed.
- (5) The mixing sample test was performed as client's request. Result obtained only gives informality value and does not represent individual sample material.
